**Re: IWWC Application #25-19 ("Lambtown Road Ext. culvert replacement with new custom inlet control structure at Ed Lamb Brook").**

Dear Commission Members:

We value the marsh and wetlands on Lambtown Road Extension. It is an important ecological resource for the town and state. It is also an important recreational and educational resource for the people of Ledyard and the state. We are concerned with how this project could impact the marsh and wetlands, especially if the water level is lowered significantly. We need more information in the application to understand the impacts of this project.

Whether you are enjoying the multitude of bird, plant and animal species, walking your dog, running or biking, this pristine and beautiful area is one of the few in the state with such depth and breadth of diversity.

Thank you.
