---

Good Afternoon, Ms. Burdick:

Attached please find an "Analysis of Rock Blasting Adjacent to WPCA Water Main and Eversource Transmission Line Supports at the Gales Ferry Intermodal Industrial Site" prepared by Aimone-Martin Associates, LLC dated September 11, 2024. This study evidences the lack of adverse impact to either the potable water transmission line in Connecticut Route 12 or the Eversource transmission line structures contained within the limits of the Transmission Line Easement bisecting the Gales Ferry Intermodal property, evaluations of which had been requested by the Ledyard Planning and Zoning Commission in conjunction with a prior application seeking approval for the industrial regrading of a portion of the Gales Ferry Intermodal, LLC property. This report is submitted for the record in this proceeding.
