RE: 109 Military Highway

Dear Ms. Quispe,

This project site has been subjected to major erosion from storm events along with tide events. This hillside is heavily vegetated with mature trees and ground cover. But this vegetation does not resist the erosion from the storm events. The property owner has lost 15'-20' of his property over the years.

I have heavily discussed this problem with George Logan the soil scientist and he is in complete agreement with using boulders and rip rap to repair this slope. Over years of time the rip rap will vegetate, but we have redesigned the plan to incorporate vegetation over the rip rap to try to satisfy all parties.

We are available to meet on site or have a conference call to further discuss this solution.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Frank Borawski', positioned above the printed name.
